

*1- Lung Cancer
Personal*

February 10, 1956

TO: LEGAL COUNSEL

We are enclosing herewith the most recently published statement of Dr. Charles S. Cameron, Medical and Scientific Director of the American Cancer Society. This is an off-print from the Atlantic Monthly of January 1956, and is completely self explanatory. It is, of course, obvious that Dr. Cameron believes that cigarettes are a profound influence on the incidence of lung cancer. Please add to the label on your copy of Volume VI the year 1956 - and then insert this item in the volume as Page 1956 a.

We are also enclosing a set of index cards for Volume VIII, Oral Cancer - and a card for the newest Hueper publication of the Public Health Service.

IMPORTANT

Will you please correct the first line of the abstract of the Merton C. Myerson article in Volume VIII - Oral Cancer - Page 16. This now reads "Dr. Myerson is one of the primary opponents of a theory . . ." and should instead read "Dr. Myerson is one of the primary proponents of the theory . . ."

A. GRANT CLARKE
